

Maison Noir

Fine Dining Restaurant

Web Programming - CSCI390
Project Phase 2

Department of Computer Science and Information Technology
2026

Abstract

Maison Noir is a frontend web application built with ReactJS for a fictional fine dining restaurant located in Beirut, Lebanon. The website transforms static HTML into a dynamic, component-based React application with client-side routing. It features five pages - Home, Menu, About, Gallery, and Contact - each designed to provide an immersive and responsive user experience. The application uses React 19, Vite 5, Tailwind CSS 4, and React Router DOM 7 for fast navigation, reusable components, and a polished UI. The project is version-controlled with Git, hosted on GitHub, and deployed via GitHub Pages.

System Design

Architecture

Single-page application (SPA) architecture using React Router for client-side routing. All pages render dynamically without page reloads.

Component Tree

```
src/
  components/
    Navbar.jsx    # Navigation bar
    Footer.jsx    # Footer section
  pages/
    Home.jsx      # Landing page
    Menu.jsx      # Menu display
    About.jsx     # Restaurant story
    Gallery.jsx   # Photo gallery
    Contact.jsx   # Reservation form
  App.jsx         # Root with routing
  main.jsx        # Entry point
  index.css       # Tailwind styles
```

Technologies Used

- ReactJS 19 - Frontend library
- Vite 5 - Build tool and dev server
- React Router DOM 7 - Client-side routing
- Tailwind CSS 4 - Utility-first CSS framework
- Git - Version control
- GitHub Pages - Deployment and hosting

Code Snippets

App Component with Routing

```
function App() {
  return (
    <BrowserRouter>
      <Navbar />
      <Routes>
        <Route path="/" element={<Home />} />
        <Route path="/menu" element={<Menu />} />
        <Route path="/about" element={<About />} />
        <Route path="/gallery" element={<Gallery />} />
        <Route path="/contact" element={<Contact />} />
      </Routes>
      <Footer />
    </BrowserRouter>
  );
}
```

Reservation Form State

```
const [submitted, setSubmitted] = useState(false);
const handleSubmit = (e) => {
  e.preventDefault();
  setSubmitted(true);
};
```

Responsive Grid Layout

```
<div className="grid md:grid-cols-2 gap-12 items-center">
  <div>{/* Text */</div>
  <div>{/* Image */</div>
</div>
```
